

Case Study: Mail Sorter Security

Client: College of Nursing in a State University

Problem:

- Tampering with mail is a federal offense, and no matter how in-depth the screening, hiring honest employees can be a difficult task.
- Although the front of mailboxes are locked and secured, the back of mail sorters usually remain open and vulnerable to theft of personal and financial information.

Solution:

- Lockable rolling doors limit access to designated security personnel, providing a tighter reign on mail distribution.
- When Rollok doors are closed and locked, personal financial information is protected from identity theft and criminal misuse.
- Unlike swinging or sliding doors which create obstructions, these doors roll up into housing to allow full access to the mail sorter area.

Quote:

“ The Rollok door implemented for the mail-room at the College of Nursing was the main selling point for the project. The Rollok door allows the mail distributor to access all mail slots from the back-side with ease and efficiency versus standard hinged doors which get in the way and are aesthetically displeasing. The college is very happy with the look and functionality of their Rollok door. ”
