

SuperStax Files

SuperStax is the newest development in filing cabinets at JETER. After 20 years, we have redesigned the Stax system for letter-size filing into what we call our new "SuperStax."

Shelf Edges Have Been Reduced To Create Larger Vertical Openings For Greater Access To Your Folders

The first change we made was to remove all of the shelf lip edges. The front shelf lips on the Stax file are $\frac{3}{8}$ ". Now they have been reduced

to the thickness of hemmed metal, which means that the vertical openings of all JETER SuperStax files are greater. There are no edges at the front to catch file folders going in and out of the file. This unique design allows far greater access when filing or retrieving folders.

SuperStax provides a clearance of $10\frac{1}{4}$ " for standard $9\frac{1}{2}$ " high end tab folders. Many systems only provide $9\frac{3}{4}$ " which is too close for fast filing.

JETER's new SuperStax cabinet next to JETER Stax file. Both files have identical dimensions allowing the new design to be used in conjunction with Stax files.

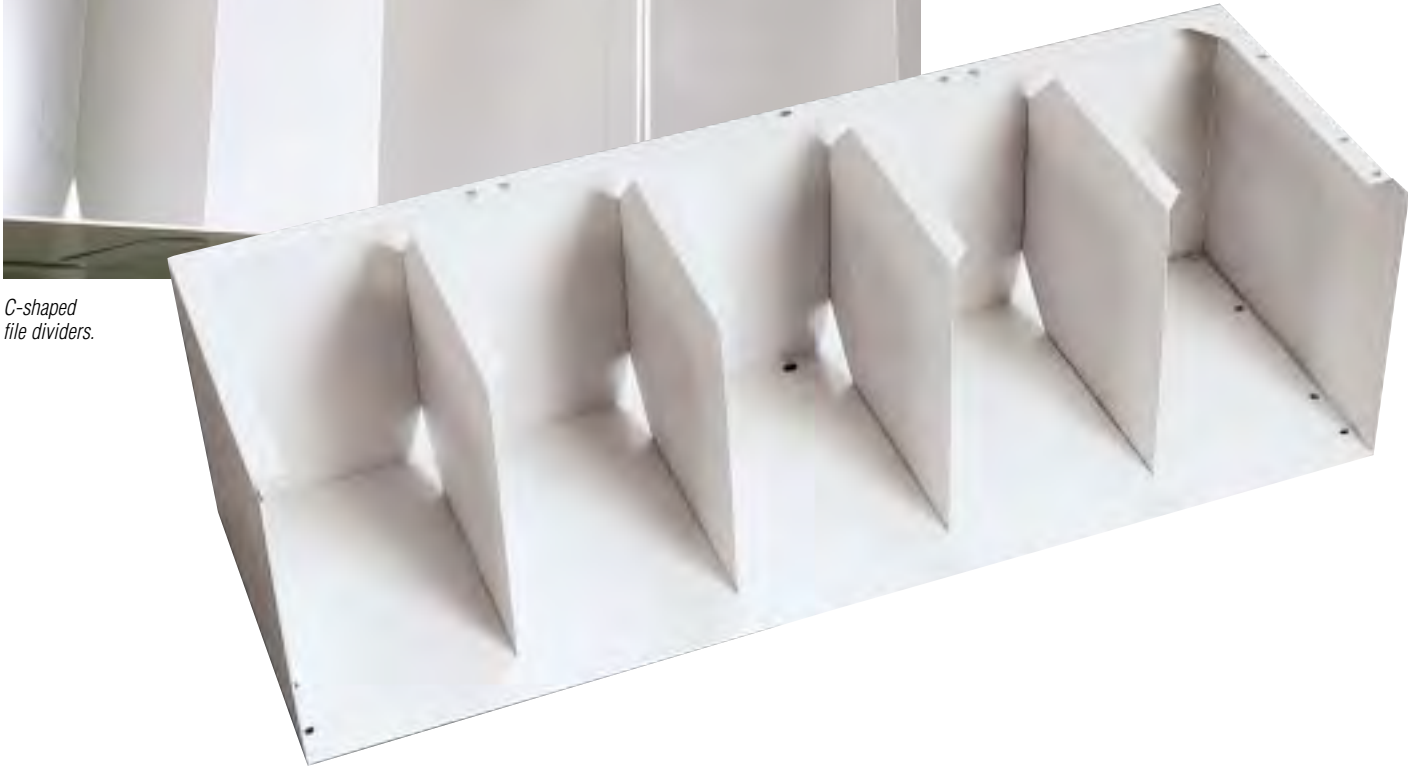

SuperStax™

Dividers are welded into all JETER filing cabinets.

C-shaped file dividers.

Special Tooling Guarantees
Exact Dimensions

This new, patent-pending design is manufactured with special tooling to ensure correct dimensions. A machine folds the cabinet, producing the correct height each time. Many competitive units do not utilize this type of equipment. It ensures our units will be exactly square with the same heights time after time.

New, Redesigned C-Shaped
Dividers Become Like
Support Posts In A Building

We have also redesigned the divider. Our new C-shaped divider is also manufactured on a special machine. This machine ensures overall tolerances on these divider heights that exactly match the cabinet that they are welded into. When the shelves stack up on one another, the dividers from one unit touch the shelf above. The file shelf dividers actually become like support posts in a building – the heavier the weight applied, the more secure and stable the units become.

JETER Auto-Title SuperStax, 9-high (on left), are much more compact than traditional letter-size files (on right).

New! Auto-Title-Size SuperStax For New Federal Titling System...

A new federal auto titling system is being adopted in many states across the United States. Automobile titles are now being created in a totally new size that is 8" H x 7" W. This new size is different from the previous titles issued, and JETER has developed a cabinet especially designed for this application. These cabinets are unique in depth, at slightly under 9", with an overall height profile of slightly over 8". This size enables nine Auto-Title shelves to stack up only slightly taller than seven letter-size Stax shelves – adding significant capacity gains.
